

# RoyalJet

## Enjoy Europe and the World on our elegant new aircraft

We are thrilled to announce that we have recently added a beautiful European-based BBJ to our award winning charter fleet.

### Our new addition allows us to broaden our market

At RoyalJet, we are excited to add this exceptional aircraft to our large and growing fleet of BBJs, to offer it to our select customers and to expand our reach further into the European market. This BBJ brings many unique attributes to our fleet, including auxiliary fuel tanks and split scimitar winglets which allow up to 12 hours of non-stop flight and make it now the longest range aircraft we offer.

This is yet another milestone in the history of our great organization!

### Featuring extensive upgrades and industry leading systems

This beautiful 18 passenger aircraft features the highest level of cabin air quality available on the market today, employing the Needle Point Bi-Polar Ionisation System provided by Aviation Clean Air. Combining this with HEPA filtration, humidifiers, noise reduction and cabin altitude modifications results in optimized passenger health and comfort, leaving you more relaxed and fresher upon reaching your destination.

The cabin also features luxurious living and dining areas, two bedrooms complete with ensuite bathrooms and showers, and the highest speed connectivity available in the sky. This system allows you to stream high definition video content throughout your flight, including from your own streaming accounts, either to your own device or to the aircraft's screens and high-quality sound system complete with overhead speakers and subwoofers.
